

EPHESIAN B. TGGAE

Software Engineer | Full-Stack & Backend Development | AI-Enabled Applications

ephesiantg@gmail.com | (630) 362-8415 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience building full-stack web applications, REST APIs, secure authentication, data-driven recommendation features, and LLM-enabled workflows. Proficient in Java, Python, JavaScript, C#, React, ASP.NET Core, and SQL, with internship experience supporting backend development, database maintenance, software testing, and Agile team delivery.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C#, SQL, HTML, CSS

Frameworks & APIs: React, ASP.NET Core, Entity Framework Core, Vite, REST APIs, Google OAuth 2.0

Data, Tools & Practices: SQLite, Git, GitHub, Visual Studio, IntelliJ IDEA, Jira, Object-Oriented Programming, Unit Testing, Integration Testing, Agile Development, LLM API Integration

EDUCATION

DePaul University — Bachelor of Science in Computer Science, Software Development Concentration | **June 2026**
Dean's List (2023) | Relevant Coursework: Web Applications, Software Testing, Object-Oriented Enterprise Computing

EXPERIENCE

Innovative Minds | Junior Developer Intern | September 2022 – January 2023

- Collaborated with backend engineers to design and maintain SQL databases supporting client loan operations.
- Supported debugging and testing of Java applications using unit and integration testing practices.
- Worked within Agile team workflows and version-control practices in a collaborative software engineering environment.

SELECTED PROJECTS

MovieNest – Community Movie Platform | Academic Project | Spring 2026

React, JavaScript, C#, ASP.NET Core, Entity Framework Core, SQLite, TMDb API, Google OAuth 2.0

- Built a full-stack movie community platform with a React single-page application and ASP.NET Core REST API, enabling authenticated users to manage watchlists, watch history, and reviews with persistent storage and per-user data isolation.
- Implemented Google OAuth 2.0, HTTP-only cookie sessions, protected routes, and authorization controls returning 401 and 403 responses for invalid access.
- Integrated the TMDb API and created genre-weighted recommendations using watch history, reviews, and seeded test data spanning 5,000 movies, 500 users, and 10,000+ interactions.

AI Essay Exam System | Academic Project | Spring 2026

Python, JavaScript, HTML, CSS, Together AI LLM API

- Built an LLM-powered essay-grading API that evaluates responses against rubric criteria and returns structured scores, explanations, and feedback.
- Implemented AI question generation with topic and difficulty selection, plus PDF, TXT, and DOCX upload processing for source-based exam creation.
- Improved workflow reliability with input validation, clear status messaging, and predictable exam-generation behavior.

Stock Exchange Simulation | Academic Project | Winter 2024

Java, Object-Oriented Programming, Design Patterns

- Designed a multi-class trading simulation supporting order matching, quote validation, market execution, and simulated real-time market updates.
- Applied object-oriented programming and design patterns to model exchange behavior and system data flow.

Personal Digital Portfolio | Independent Project | Summer 2024

HTML, CSS, JavaScript, GitHub Pages

- Developed and deployed a responsive portfolio to showcase technical projects, using media queries for adaptive design across devices.
- Implemented a dual-navigation experience with smooth transitions and accessibility across desktop and mobile layouts.
